# PLEASE READ ALL DIRECTIONS CAREFULLY BEFORE MEASURING YOUR POOL! ONCE YOUR SAFETY COVER IS IN PRODUCTION, ALTERATIONS CAN NOT BE MADE. CUSTOM SAFETY COVERS CANNOT BE RETURNED.

Only through your measurement accuracy can we ensure the proper fit of your safety cover. Your safety cover will be made to these specifications once you place your order.

**Type 1 Pools** For pools that are Rectangles, Rectangles With Step Sections, Rectangles with Bowed Ends or Rectangles with Grecian Ends

Name \_\_\_\_\_

**NOTE:** If you are looking to match existing anchors OR have non-removable objects like a rock structure, a raised wall, waterfalls, raised spas, or planters that come within 3 feet of the pool edge, you will need to use the TYPE 2 instructions with the A-B measuring method.

#### Tools You will need:

- Chalk
- 100 ft. tape measure. Working with another person will make measuring much easier.
- Black pen for filling out forms, please write legibly.
- 1. Draw an accurate diagram indicating inside pool dimensions using the grid worksheet provided. Include the deck area.
- 2. Listed below are the required measurements. Locate your particular type of pool and list your measurements accordingly; be sure they are inside waterline dimensions.
- **3.** If you have any non-removable obstructions within 18" of the waterline, locate them on your diagram. Measure the distance from the obstruction to the pool's edge and also measure the distance from the obstruction to the closest squared off corner of the pool.
- **4.** If you have a step section, be sure to provide step length and width, and the offset of the step if applicable. Provide measurements as indicated by arrows.

## **Measure Examples**

## Measure Examples For Type 1 Pools

#### 

## **Type 2 Pools** (A-B Measuring Method)

| Name |  |
|------|--|
|      |  |

**NOTE:** The "A-B" Line must never intersect the pool line and must be at least 4 feet away from the pools edge at all times regardless of how far the line is extended.

**For customers looking to match existing anchors** you will need to measure BOTH the pool and the anchors from the same A-B line. The A-B line should be positioned 4-5 feet behind the anchors. You will need to submit two measurement sheets, one for the pool and one for the anchors.

#### Tools You will need:

- Chalk
- 100 ft. tape measure. Working with another person will make measuring much easier.
- · Black pen for filling out forms, please write legibly.
- 1. Draw an accurate diagram indicating INSIDE pool dimensions using the graph provided. Include the deck area, planters and any obstructions within 18" of the waterline. Photographs of the pool are required when having rocks, waterfalls, raised walls, spas or anything out of the ordinary.
- **2.** Establish 2 points, "A" & "B" parallel to the long side of the pool (see at right). These points should be at least 25 ft. apart and can easily be marked with chalk. Point "A" must be to the left of "B" as you face the pool. Be sure to provide us with the distance between "A" and "B".
- 3. Using chalk, mark and number points along the inside edge of the pool at a maximum of 2 ft. intervals. Number all corner points, direction changes, ladders, handrails, grabrails, slide legs, rocks, spill ways, spa walls separating spa and pool, fill spout and dive stands that are not removable in the fall. 1 ft. intervals should be used in small or tight radius areas. Be sure to identify all obstruction points when filling in your measurements on the measuring chart provided. Always number in a clockwise direction.

Refer to the following TYPE 2 POOL A-B MEASURING METHOD INSTRUCTIONS page. It contains detailed instructions on how to correctly measure and record the measurements of your pool.

## **Type 2 Pool A-B Measuring Method Instructions**

For pools that are Round, Oval, Kidney, Lazy "L" And Free Form Shaped

Name \_\_\_\_\_

- 1. Using chalk, establish two points "A" and "B", roughly three to four feet from the edge of the pool at least half the length of the pools distance (usually 20 ft 25 ft in length). When facing the pool, Point A must be on your left and Point B on your right (see drawing). The "A—B" Line must not cross the edge or water of the pool. All measurements from the numbered points must touch point A and B at exactly the same point.
- √ Record the distance measurement of A-B in the space indicated on the measuring form.
- 2. Using chalk, make a mark and number points at the edge of the coping, two feet apart around the perimeter of the pool. Include all non-removable objects within 3 feet of the pool's edge.

- **3.** Next, measure the distance between Point "A" and Point "1" then "A" to point "2" and so on... until you have gone all the way around the pool.
- √ Record each measurement on the A-B Measurement Sheet.
- **4.** Now measure the distance from POINT B to all of the numbered points, using the same process that you did for Point "A".
- √ Record each measurement on the A-B Measurement Sheet.
- **5.** Finally, measure the overall width and length of the pool by selecting numbered points that represent these distances. It is also helpful if you provide four Cross Dimension measurements 2 for the width and 2 for the length of the pool. (See drawing).
- √ Record each measurement on the A-B Measurement Sheet.

#### A-B Measurement Sheet Examples
